Total Music by Rocket GUI

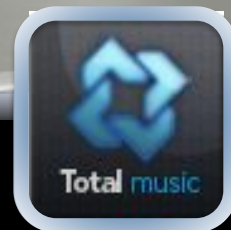

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

Free demo of this module is included in CCP. The demo can be unlocked for full capability by purchasing a license from URC ToolBox. Total music provides full 2-Way browsing and total control of all features of the Logitech Squeezebox!!!

At last, Pandora and Rhapsody, search and browse any pc or network drive as well as select any of the tens of thousands of internet radio stations.

You'll specify a Logitech Squeezebox and a PC loaded with Logitech Squeeze Center. The PC must be on, and Squeeze Center software must be running, for MX-6000 to connect to the Logitech Squeezebox.

FLAGSHIP EXCLUSIVES

NetStreams

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

Provided for you free by NetStreams, this 2-Way module offers everything you'd expect in such a system but adds IP based communication and control. Netstream's DigiLinX provides audiophile and videophile quality to as many rooms as you need.

The Netstreams module displays all the features of any Netstreams touch screen, so your client operates everything that is "Netstream's controlled" from within the module. If the client wants to utilize any other URC module, he or she presses the EXIT button, which displays the normal URC Main Menu.

URCTM
Control the Experience.

FLAGSHIP EXCLUSIVES

My Media by Autonomic

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

Although this is one of the few modules with a price tag... the end result is worth it! **My Media** takes the customer's AV experience to a new level. Take control of Windows Media Center and browse all content, right from the MX-6000! Everything included in the free My Music module, plus Pandora, XM and full browsing of all the movies, TV shows and videos in the digital library.

It is easy to convert a PC into a dedicated multi-room server. My Media will convert an 8 channel sound card into 4 separate, 2-channel zones... each capable of playing independent sources!

FLAGSHIP EXCLUSIVES

Kaleidoscope

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

Every movie you enjoy, every song you've ever loved, instantly available with unprecedented access and detail... that is the Kaleidoscope experience. To put all of this enjoyment at your fingertips you'll want a hand-held interface that not only navigates the entertainment, but also provides true feedback right on the control screen. Browse songs or movies by cover art, artist and more directly on the touch screen.

Kaleidoscope's free module provides cover Art and synopsis for the now playing movie. All browsing for content is done on the TV screen. With Music, all browsing can be done on the screen of the MX-6000 without using the TV GUI.

Web Browser

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

Have your company's programmer enhance the value of the MX-6000 in a home theater by pre-programming one touch icons for things like detailed movie descriptions from IMDB or instant Netflix queue management. You could even set up an icon for the client's favorites take out restaurant. .

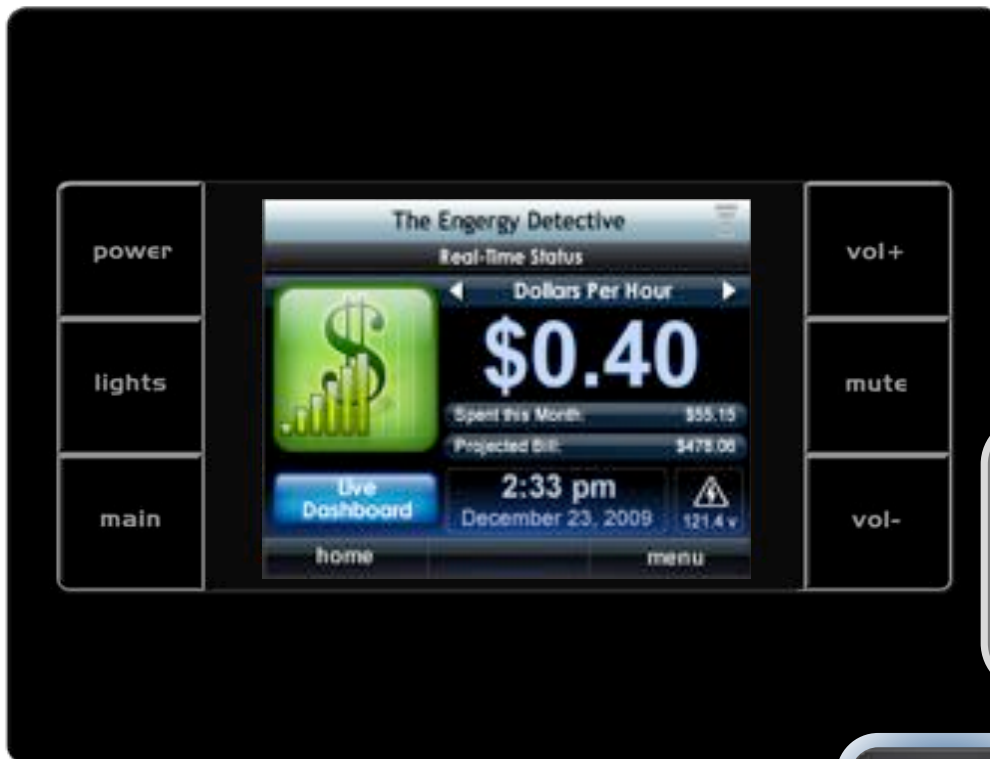

Note that the Microsoft CE web browser cannot display flash content. However, it can display video from MSN.com.

FLAGSHIP EXCLUSIVES

TED - Energy Management without Big Brother!

Other energy management systems rely on the Power Company providing a special meter to your client's house and demand that your client pay different fees for electricity based on demand. Not a popular idea! By installing TED (*The Energy Detective*) and URC, you can provide energy management **without violating** your client's privacy.

www.theenergydetective.com

URC offers free two way modules for TED 5000, which an electrician can easily install in the main panel in a few minutes.

The TED wirelessly communicates to the URC Keypads and remotes via the network.

Climate Control (Proliphix)

URC NETWORK SYSTEM CONTROLLERS
MX-5000 KP-4000

No more chilly mornings, no more wasted energy! Keep tabs on the temperature in the zones you're not in, even while away from home. For even greater savings and comfort, combine Climate Control with an Energy Management system.

Your client saves money and conserves energy by reducing the heat (or cooling) when they don't need it—like when they're at work or asleep—and without sacrificing comfort. A reliable climate control system will save them some "green" while doing "green things" for the planet.

URC IP Cameras

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

Who is that at the front door? Is the baby sleeping soundly? Mom may have had eyes in the back of her head, but you can have eyes everywhere when you have network-connected cameras installed at strategic locations. See what you're missing.

No home control system is complete if it's blind. Adding URC network-connected cameras extends the usefulness of any system while increasing security and peace of mind. What would it be worth to you to be able to keep an eye on the deck, pool or front door?

HOME CONTROL

URC Lighting

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

Control wall dimmers, lamp dimmers and switches directly from URC remote controls. Create ambience and enjoy the convenience while you save energy and extend bulb life. Improve security; give your home that “lived in” look, even while on vacation.

Give your customers control of the lights in the room they're in with lighting control that's backed by two of the largest names in the business – Universal Remote Control and Lutron Electronics – both committed to quality, reliability, service and support.

URCTM
Control the Experience.

HOME CONTROL

Weather

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

T-shirt or sweater? Flip-flops or boots? Even before your first cup of coffee you can check your current weather conditions, and 5-day weather forecast, without turning on the TV. You can choose any city in the world, so whether you want to know about where you are, where you're going, or just where you would rather be, it's all at your fingertips with URC.

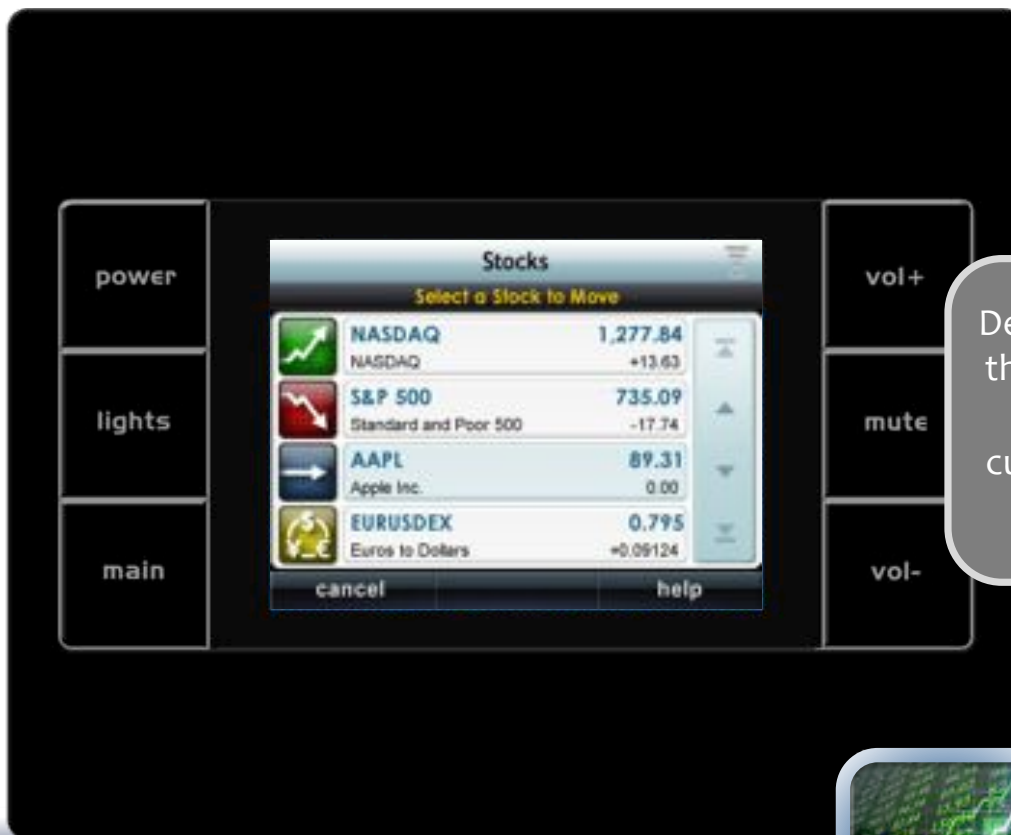

A "must have" for all the KP-4000 keypads! Use this as a "landing page". Whenever the client turns off the system, the screen displays the weather module...

Stocks

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

Want to check your latest stock prices without firing up the computer or waiting for the ticker to go by on the television? Just press "**Stocks**" on your URC two-way Network System controller for instant up-to-date quotes. We can't make you money, but we can help you keep an eye on what you have!

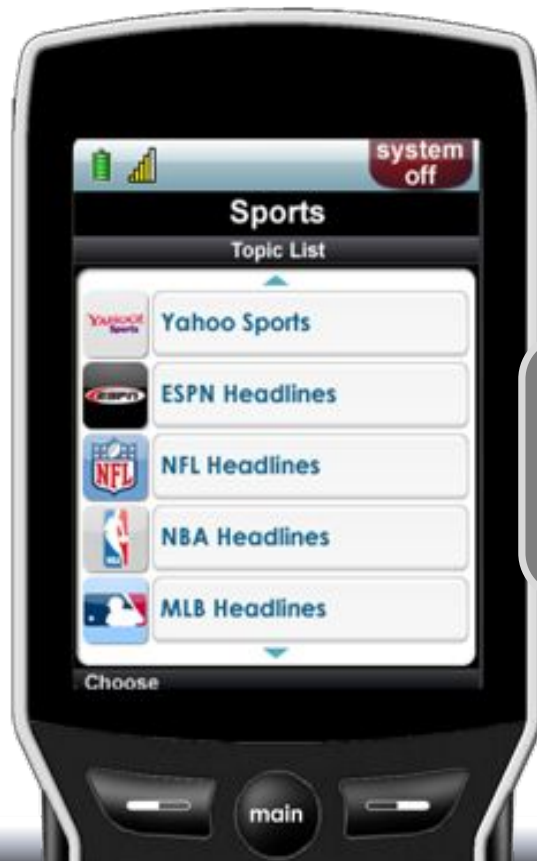

Demonstrate to the customer how easy it is for them to enter their own symbols for the latest stock prices on their portfolio. Show the customer that it is not just a remote control or keypad, but an information center.

Sports

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

We all get grief when we want to change the channel to check out the latest sports scores, so let URC step in and eliminate those awkward moments. Simply click the **Sports** icon on your Network Controller and access more than a dozen, sports-specific, feeds from major networks and newspapers... each with headlines, stories and scores!

The customer can easily choose and personalize their experience. From specific sports like MLB, NHL, NBA or NFL to favorite sportswriters or newspapers, all the sports related information is at the customer's fingertips!

News

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

Can't get enough news, but don't want to fire up your computer or change the channel?
Who wants to upset the family while watching America's Next Idol?
Just press "**News**" on your URC two-way Network System controller for instant news updates.

Demonstrate to the customer how easy it is to access the latest news story by selecting the "news" icon on your system controller or in-wall keypad.

Control the Experience.

INFORMATION FEEDS

PSX-2: The Personal Server

URC NETWORK SYSTEM CONTROLLERS
MP-6000 MX-5000 KP-4000

Take complete control of any iDevice (POD, Touch, Phone)! The PSX-2 has over 280 discrete codes, and, once an ipod is connected, it is a full featured server! One touch access to your playlist, shuffling by genres or create your own jukebox (*playlist*). Pair the PSX-2 with a URC Network Controller and have full navigation of all of your stored content... right on the remote. This two-way module shows both metadata and album art.

Demonstrate one touch operation for both audio and video content, not the seemingly endless navigation necessary on most other docks. By adding the PSX-Link software, you can sync your device without tethering it to the computer! Imagine renting a movie on iTunes, syncing with the PSX-2 and being able to see it immediately on your TV.

Windows Media Center

Now you can offer IP control of a Windows Media Center right from a URC Network Controller, with two-way feedback of all Now Playing information on the screen of the remote.

The client browses for content on the TV screen without ever having to point the remote, all the commands are sent via fast, fluid IP, not infrared. No IR dongle required!!!

My Music: Combines all Music!

Access your PC's music library, without ever touching a mouse or keyboard. iTunes or Windows Media Player formats, the My Music module allows for seamless browsing and playback of individual songs and personalized playlists without the use of any additional third party equipment.

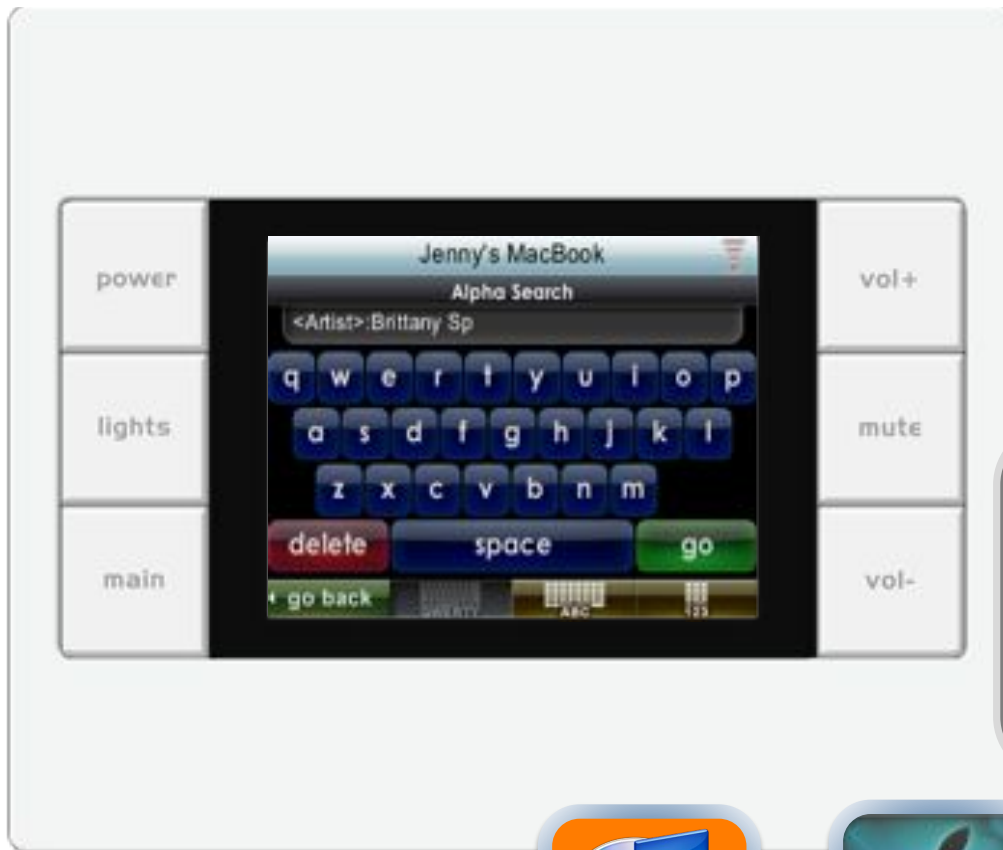

Everyone owns a PC loaded with music, which means everyone has an existing music library at their fingertips - no extra cash spent by your customer. Simply connect their PC to an AV system via analog audio cables and allow users to select songs, build song queues, enjoy cover art and playback status.

Apple TV or iTunes: Music in any room

Any URC network keypad or remote can now browse and control the entire iTunes music library stored on any PC, Mac or Apple TV. Multiple PC's or Macs in the house with different libraries? No problem! Just add a module for each to the remote/keypad Main Menu!

With the popularity of iTunes and digitally stored music, this is an unique, expanded iTunes experience. Shortcuts to any menu, alphabetically search any list, enjoy cover art, artist, album and song metadata anywhere in the house.

Apple TV and Apple TV Plus

The **Apple TV** module is designed for use in rooms without a TV. All browsing is done on the screen of the remote or the keypad. When your client is in a room with a TV connected to the Apple TV, they may sometimes want to share the browsing with others in the room. The **Apple TV+** module can switch between browsing on the remote **or** the TV.

When using the **Apple TV +** module from URC, your client first presses the **browse on tv** button, then uses the 5 way cursor buttons to navigate the TV screen.

URCTM
Control the Experience.

APPLE

Apple TV

Connect PCs & Macs to any AV system Wirelessly!

All the new URC two way modules for Apple incorporate control of the \$99 Apple Airport Express. This enables you to offer clients wireless audio connection to any Apple TV, Mac running iTunes or a PC running iTunes.

NO WIRES NEEDED!

The Apple TV, Mac or PC can be anywhere in the house, without long, expensive audio cables. Simply connect an Airport Express to the audio system. iTunes streams wirelessly to the Airport Express, which translates the stream to a standard analog audio output.

Wirelessly link separate audio systems...

All URC Apple two way modules have a **Speaker Select** screen, which enables your client to turn on or off any Airport Expresses. By connecting an Airport Express to every audio system in the house, you make it possible for your client to listen to the same iTunes music everywhere and to selectively turn rooms on and off.

You can connect an Airport Express to a real AV system, but in some rooms, a pair of powered speakers connected to an Airport Express may be all your client needs!

Volume Pop Up

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

Do you remember when we “lost” the old-fashioned **volume** knob on our TV and were given the on-screen volume display? How about the digital displays on AVRs? We all love visual feedback, but we are not always within sight of the TV or receiver...

With URC’s **Volume Pop Up** two-way module, you will always have visual feedback when you change volume... any source you choose, no matter where (*within range*) you are.

As Volume Pop Up modules are available for B&K, Denon, Integra, Onkyo and Yamaha network enabled receivers, we have most of the popular brands covered... with more added all the time. Be aware of socket limitations in certain receiver brands when specifying multiple keypads or remotes, especially when simultaneous users are a possibility.

Zone Specific Volume Pop Up

How can you tell where your volume level is when you are out on the deck, or in any secondary zone? With URC's **Zone Specific Volume Pop Up** the AVR volume level and **zone location** will be immediately visible on the remote or keypad...and labeled by zone!

Forget those ugly in-wall volume controls... they look bad, have no real indication of level and simply aren't "cool". Give your customer real control and replace it with a KP-4000 (Network Keypad) for **Volume Pop Up**, metadata and full control... let's see your analog volume control do that!!!

AM/FM Radio

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

Deliver front-panel AVR functionality directly to your remote/keypad screen; all from a network connected radio tuner in the home. With all this, changing radio stations, storing favorites (local or global) and selecting presets from a system controller brings listening sessions to new heights.

This AM/FM two-way module, as well as XM and/or Sirius modules provide a very complete, robust audio control experience. A snapshot of a specified zones' overall audio status saves your client visits to the equipment rack.

HD Radio

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

More and more, AVR's include an HD Radio tuner today; with these two-way installed, you can see feedback... right on the remote control! Channel name, artist and song title, just like the front panel of the AVR, without getting up or even being in the same room. You can choose favorite stations, add and manage presets on the receiver and the individual remote.

This is the “metadata generation”... people see it on their iPods, phones, MP3 players, satellite radios, etc. Now, it is showing up in automobiles as a standard feature with HD radio. Use this two-way module to allow a seamless experience from their car to their home.

Satellite Radio

URC NETWORK SYSTEM CONTROLLERS
MX-6000 MX-5000 KP-4000

With Sirius and XM channel logos, surfing is fun again. Your guests can prepare playlists while you prepare the hors d'oeuvres, it's as simple as storing any standard radio preset via 'press and hold.' Satellite radio modules display song, artist and title metadata; a game changing addition.

Channel artwork makes station surfing fun; a feature unavailable in standard Satellite tuners and AVR's. Artist metadata enables your customers to see what they hear right on their handheld controller. It's music discovery made simple! A no-brainer for current subscribers.

Integra Now Playing – Internet Music

Integra AVRs DTR-80.1 DTR-70.1 DTR-50.1 DTR-40.1 and DTR-40.2 all support on TV browsing and selection of Internet Music from Pandora, Rhapsody, Sirius, Vtuner and playback of music from a network connected PC or hard drive.

The free 2-Way URC Now Playing module browses and selects on the TV screen and displays metadata of the currently playing song, artist and album on the screen of the remote.
